

Male Actuation Tee

The male actuation tee is used to connect multiple actuation hoses together. The actuation tee has a 7/16-20 thread for connecting to the female actuation hose and a NPT thread for connecting to the pneumatic actuator on the container discharge valve.

Figure 21 - Male Tee (Part No. 31811)

Male Actuation Elbow

The male actuation elbow is used to connect the actuation hose to a single or last container in a multiple container system. The elbow connects between the hose and the pneumatic actuator on the valve. The elbow has a 7/16-20 thread for connecting to the hose and a 1/4 in. NPT thread for connecting to the pneumatic actuator on the container discharge valve.
